

GreenTree

FLOORING

QUALITY KILN DRIED TIMBER

Introduction

Hurford Hardwood has introduced a flooring range derived exclusively from Certified Hardwood Plantations. GreenTree Flooring is 100% plantation hardwood that not only helps to protect the planet, it creates highly sort after aesthetic flooring with a very unique, rustic look and with an abundance of pure natural feature.

Bring a natural look to your floor

GreenTree flooring offers a unique rustic look and feel encapsulating the true feeling of the Australian Bush. Each feature represents a period of time that the forest has gone through, whether it is the dense tight grain caused by drought, or dark rouged gum veins caused by scorching wildfires, these features are a chronicle of the history of your floor. No two GreenTree floors are ever the same; yours will be an individual, original hardwood floor, with an abundance of natural beauty.

GreenTree Flooring and the Environment

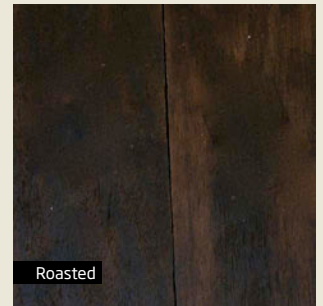

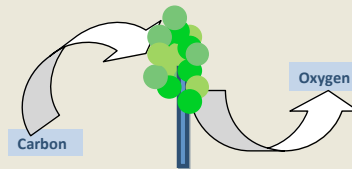

The Resource

Hurford Hardwood has invested in enormous areas of farm land that it is replanting with local hardwoods to create a sustainable resource that will be available for flooring production for many years to come. In addition to this Hurford Hardwood has access to other private and government hardwood plantations that it uses for the production of GreenTree Flooring. So when you use GreenTree flooring, you are guaranteed that the resource is helping the environment.

A percentage of the profits from the sale of GreenTree Flooring are being invested into the further creation of hardwood plantations, lessening the need to harvest naturally grow native forests.

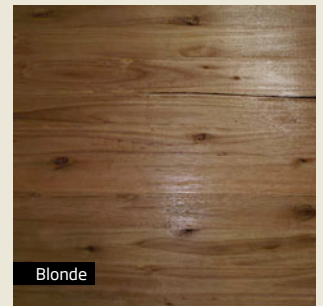

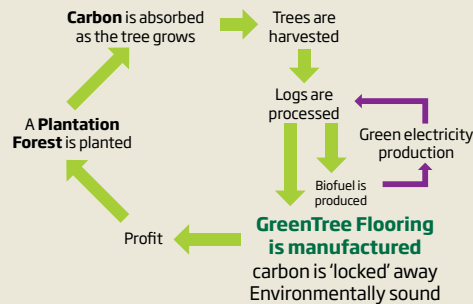

Carbon Sink

Hardwood acts as a carbon sink, absorbing up to 1 tonne of carbon for every cubic metre of growth, while expelling ¾ of a tonne of Oxygen at the same time. Once harvested the carbon is locked in to hardwood making it the lowest carbon emitting building product available.

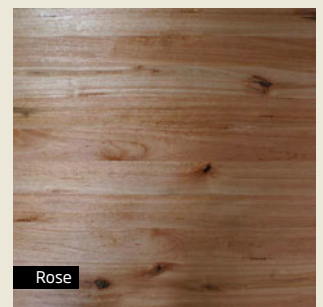

BioFuel

Wasted generated from the production of GreenTree Flooring is then used as a Biofuel in a local co-generation plant. This waste results in a carbon neutral substitute for fossil fuel energy.

GreenTree Flooring Product Table

Product	Size	Description
 Ultra10 <small>SOLID HARDWOOD FLOORING</small>	86mm x 10mm	A good, economic use of the timber ensuring maximum usage of the resource.
 FOURTEEN <small>SECRET NAILING WIDE BOARD APPLICATIONS</small>	83mm x 14mm 130mm x 14mm 180mm x 14mm	For secret nailing wide board applications over a solid subfloor.
Traditional 19mm	80mm x 19mm 130mm x 19mm	For installation over traditional Bearers and Joists.

Colour Options

GreenTree Flooring is available in variety of colour options to enable you to specify the flooring the best matches the colour tones you require.

Rose: A light to medium red, with pronounced grain patterns and highlighting features.

Blonde: A straw through to blonde blend with a hint of honey tones.

Hurford Hardwood Roasted: Hurford Hardwood is introducing a new process that changes the molecular structure of the cells, this practice produces a attractive deep chocolate colour flooring. Unlike staining a floor, the colour change is permanent and completely through the wood.
